

Answer **one of the** following questions:

1. Implement Dijkstra's MST as described in class.
 - a. Show me the code and in class demo for the program showing how you presented the graph and the steps of the algorithm.
 - b. You have the freedom to use any DS to represent the graph.
 - c. Run the program for the input graph and show me the final MST.

2. Implement Dijkstra's shortest path starting from node 0 (as described in class).
 - a. Show me the code and in class demo for the program showing how you presented the graph and the steps of the algorithm.
 - b. You have the freedom to use any DS to represent the graph.
 - c. Run the program for the input graph and show me the final shortest path values
